1. Settlement Eligibility

A merchant settlement request is eligible for processing after the required reconciliation checks have completed successfully and no blocking exception remains open.

2. Settlement Window

Standard merchant settlements are processed according to the configured settlement schedule for the applicable market and payment processor. The settlement schedule is authoritative for determining the expected processing date.

3. Settlement Failure

A failed settlement attempt must be retained with its failure reason and correlation identifier. The settlement operation may be retried when the failure is classified as retryable.

4. Manual Settlement

Manual settlement handling requires an auditable support action and must include the merchant, transaction or settlement reference, reason, and operator identity.
